REQUEST FOR CORRECTED FILING RECEIPT

Office of Initial Patent Examination
Customer Service Center
Assistant Commissioner for Patents
Alexandria, VA 22313-1450

Dear Sir:

Enclosed is a copy of the filing receipt from the United States Patent and Trademark Office in the above-identified application showing requested corrections.

The Assignment information does not appear on the Filing Receipt. Please add Osaka Industrial Promotion Organization, Osaka, JAPAN.

Correction of the records of the United States Patent and Trademark Office and issuance of a corrected filing receipt are respectfully solicited.

Respectfully submitted,

52835

FILING RECEIPT

OC000000021673761

Date Mailed: 12/26/2006

Receipt is acknowledged of this regular Patent Application. It will be considered in its order and you will be notified as to the results of the examination. Be sure to provide the U.S. APPLICATION NUMBER, FILING DATE, NAME OF APPLICANT, and TITLE OF INVENTION when inquiring about this application. Fees transmitted by check or draft are subject to collection. Please verify the accuracy of the data presented on this receipt. If an error is noted on this Filing Receipt, please mail to the Commissioner for Patents P.O. Box 1450 Alexandria Va 22313-1450. Please provide a copy of this Filing Receipt with the changes noted thereon. If you received a "Notice to File Missing Parts" for this application, please submit any corrections to this Filing Receipt with your reply to the Notice. When the USPTO processes the reply to the Notice, the USPTO will generate another Filing Receipt incorporating the requested corrections (if appropriate).

423

PROTECTING YOUR INVENTION OUTSIDE THE UNITED STATES

Since the rights granted by a U.S. patent extend only throughout the territory of the United States and have no effect in a foreign country, an inventor who wishes patent protection in another country must apply for a patent in a specific country or in regional patent offices. Applicants may wish to consider the filing of an international application under the Patent Cooperation Treaty (PCT). An International (PCT) application generally has the same effect as a regular national patent application in each PCT-member country. The PCT process simplifies the filing of patent applications on the same invention in member countries, but does not result in a grant of "an international patent" and does not eliminate the need of applicants to file additional documents and fees in countries where patent protection is desired.

Almost every country has its own patent law, and a person desiring a patent in a particular country must make an application for patent in that country in accordance with its particular laws. Since the laws of many countries differ in various respects from the patent law of the United States, applicants are advised to seek guidance from specific foreign countries to ensure that patent rights are not lost prematurely.

Applicants also are advised that in the case of inventions made in the United States, the Director of the USPTO must issue a license before applicants can apply for a patent in a foreign country. The filing of a U.S. patent application serves as a request for a foreign filing license. The application's filing receipt contains further information and guidance as to the status of applicant's license for foreign filing.

Applicants may wish to consult the USPTO booklet, "General Information Concerning Patents" (specifically, the section entitled "Treaties and Foreign Patents") for more information on timeframes and deadlines for filing foreign patent applications. The guide is available either by contacting the USPTO Contact Center at 800-786-9199, or it can be viewed on the USPTO website at <http://www.uspto.gov/web/offices/pac/doc/general/index.html>.

For information on preventing theft of your intellectual property (patents, trademarks and copyrights), you may wish to consult the U.S. Government website, <http://www.stopfakes.gov>. Part of a Department of Commerce initiative, this website includes self-help "toolkits" giving innovators guidance on how to protect intellectual property in specific countries such as China, Korea and Mexico. For questions regarding patent enforcement issues, applicants may call the U.S. Government hotline at 1-866-999-HALT (1-866-999-4158).

**LICENSE FOR FOREIGN FILING UNDER
Title 35, United States Code, Section 184
Title 37, Code of Federal Regulations, 5.11 & 5.15****GRANTED**

The applicant has been granted a license under 35 U.S.C. 184, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" followed by a date appears on this form. Such licenses are issued in all applications where the conditions for issuance of a license have been met, regardless of whether or not a license may be required as set forth in 37 CFR 5.15. The scope and limitations of this license are set forth in 37 CFR 5.15(a) unless an earlier license has been issued under 37 CFR 5.15(b). The license is subject to revocation upon written notification. The date indicated is the effective date of the license, unless an earlier license of similar scope has been granted under 37 CFR 5.13 or 5.14.

Page 3 of 3

This license is to be retained by the licensee and may be used at any time on or after the effective date thereof unless it is revoked. This license is automatically transferred to any related applications(s) filed under 37 CFR 1.53(d). This license is not retroactive.

The grant of a license does not in any way lessen the responsibility of a licensee for the security of the subject matter as imposed by any Government contract or the provisions of existing laws relating to espionage and the national security or the export of technical data. Licensees should apprise themselves of current regulations especially with respect to certain countries, of other agencies, particularly the Office of Defense Trade Controls, Department of State (with respect to Arms, Munitions and Implements of War (22 CFR 121-128)); the Bureau of Industry and Security, Department of Commerce (15 CFR parts 730-774); the Office of Foreign Assets Control, Department of Treasury (31 CFR Parts 500+) and the Department of Energy.

NOT GRANTED

No license under 35 U.S.C. 184 has been granted at this time, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" DOES NOT appear on this form. Applicant may still petition for a license under 37 CFR 5.12, if a license is desired before the expiration of 6 months from the filing date of the application. If 6 months has lapsed from the filing date of this application and the licensee has not received any indication of a secrecy order under 35 U.S.C. 181, the licensee may foreign file the application pursuant to 37 CFR 5.15(b).

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.

PCT/JP2004/014737

Box No. I Basis of the report

1. With regard to the language, this report is based on the international application in the language in which it was filed, unless otherwise indicated under this item.

- ☐ This report is based on translations from the original language into the following language _____ which is the language of a translation furnished for the purposes of:
- ☐ international search (Rule 12.3 and 23.1(b))
- ☐ publication of the international application (Rule 12.4)
- ☐ international preliminary examination (Rule 55.2 and/or 55.3)

2. With regard to the elements of the international application, this report is based on (replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report):

- ☐ the international application as originally filed/furnished
- ☒ the description:
- pages 1-14 _____ as originally filed/furnished

pages* _____ received by this Authority on _____

pages* _____ received by this Authority on _____

- ☒ the claims:
- nos. 3-9, 11-20 _____ as originally filed/furnished

nos.* _____ as amended (together with any statement) under Article 19

nos.* 1, 10 _____ received by this Authority on 17.02.2006

nos.* _____ received by this Authority on _____

- ☒ the drawings:
- sheets fig. 1-15 _____ as originally filed/furnished

sheets* _____ received by this Authority on _____

sheets* _____ received by this Authority on _____

- ☐ a sequence listing and/or any related table(s) - see Supplemental Box Relating to Sequence Listing.

3. ☒ The amendments have resulted in the cancellation of:

☐ the description, pages _____

☒ the claims, nos. 2 _____

☐ the drawings, sheets/figs _____

☐ the sequence listing (specify): _____

☐ any table(s) related to sequence listing (specify): _____

4. ☐ This report has been established as if (some of) the amendments annexed to this report and listed below had not been made, since they have been considered to go beyond the disclosure as filed, as indicated in the Supplemental Box (Rule 70.2(c)).

☐ the description, pages _____

☐ the claims, nos. _____

☐ the drawings, sheets/figs _____

☐ the sequence listing (specify): _____

☐ any table(s) related to sequence listing (specify): _____

* If item 4 applies, some or all of those sheets may be marked "superseded."

[0014]

The inventions set forth in claims 1, 3, 4, 6, 7,
10, 11 and 19 do not involve an inventive step in the
light of document 1 cited in the international search
report. Document 1 discloses a gas that is used in a
process for desorbing the component to be treated, a
process for breaking down the component to be treated and
a process for regenerating the adsorbent, and indicates

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.

PCT/JP2004/014737

Box No. V

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability:
citations and explanations supporting such statement

that the oxygen and the nitrogen in the abovementioned gas promote the abovementioned process for breaking down the component to be treated. Such being the case, document 1 can be considered to indicate that the abovementioned gas is a gas that comprises both oxygen and nitrogen. Therein, document 1 also indicates that the component to be treated, which is present within the desorbed gas, is further broken down by means of a separate device.

Meanwhile, the fact that it is undesirable for the gas that is used when desorbing the NO_x from an adsorbent to have a high oxygen content is well known, as disclosed in document 2 and document 3 cited in the international search report for example. In addition, the process for treating a gas that contains NO_x, wherein a non-thermal plasma that was generated by means of a plasma reactor is applied to said gas in order to reduce the NO_x to N₂, is also well known, as disclosed in newly cited document 4 for example.

Such being the case, it would have been easy for a person skilled in the art to conceive of configuring so that the abovementioned gas in the invention disclosed in document 1 has a high nitrogen content and a low oxygen content; establishing an upper limit for the oxygen content of the gas and a lower limit for the nitrogen content of the gas in order to ensure that the gas has a suitable nitrogen content and a suitable oxygen content; and applying a non-thermal plasma that was generated by means of a plasma reactor to the NO_x-containing gas that was desorbed from the adsorbent in order to reduce the NO_x to N₂.

International application No.

PCT/JP2004/014737

Box No. V

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability;
citations and explanations supporting such statement

The inventions set forth in claims 5 and 20 do not involve an inventive step in the light of document 1. The technical feature wherein the exhaust gas is used as the gas in the process for desorbing the component to be treated is well known, as disclosed in document 5 cited in the international search report for example.

The inventions set forth in claims 8 and 9 do not involve an inventive step in the light of document 1. The technical feature wherein a non-thermal plasma is applied to the gas by means of one of the methods set forth in claim 8 or a combination of said methods, and the technical feature wherein an additional quantity of the catalyst is added during the process for removing the component to be treated in order to improve the removal efficiency of said process were both well known.

The inventions set forth in claims 12 to 18 do not involve an inventive step in the light of document 1. Configurations wherein it is possible to switch between a plurality of pre-prepared flow paths in order to remove the component to be treated by means of an adsorption process and a desorption process, and configurations wherein the abovementioned switching method is a method that involves switching valves or a method that involves a rotating rotor are both well known. In addition, the technical feature wherein the flow path for subjecting the component to be treated to a desorption process and a detoxification process is a gas circulation path; the technical feature wherein the gas pressure and the gas temperature are changed during the process for adsorbing the component to be treated and the process for desorbing the component to be treated in order to promote the adsorption and the desorption of the component to be

treated; the technical feature wherein the exhaust gas treatment device is equipped with a gasometer device that has a sensor for detecting the concentration of a prescribed gas in order to control the content of said prescribed gas within a mixed gas; and the technical feature wherein the exhaust gas treatment device is provided with a device for scavenging the aerosols and the fine particles that are present within the exhaust gas are all well known.

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.

PCT/JP2004/014737

Box No. VIII Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

With regards to the "non-thermal plasma of a nitrogen gas," which is set forth in claim 1, paragraph [0019] indicates that "the term 'non-thermal plasma,' as used in the present invention, refers to an ionized plasma with a gas temperature that is significantly lower than the combustion temperature of conventional gasses (i.e. a temperature of approximately 700 to 1000°C), said plasma generally having a temperature of 300°C or lower." Such being the case, the "non-thermal plasma of a nitrogen gas" from claim 1 is thought to be a plasma with a temperature of 300°C or lower, which is substantially lower than a temperature of 700°C.

However, claim 6, which cites claim 1, indicates that the "aforementioned nitrogen gas plasma gas has a temperature of 1000°K or lower." Therein, if the "aforementioned nitrogen gas plasma gas" is referring to the "non-thermal plasma of a nitrogen gas" which is set forth in claim 1, then the specific range of temperatures for the "non-thermal plasma" that is set forth in claims 1 and 6 is unclear.
